part 1:

```
1  /* The integer member of struct Node is named vertNum (for vertex number) b/c
2  in the next program it will be used to store the number of a graph vertex. In
3  this warmup exercise it does not mean anything.*/
4  #include <stdio.h>
5  #include <stdlib.h>
6  // A structure to represent each node of a linked list
7  struct Node {
8      int vertNum;
9      struct Node* next;
10 };
11 // A utility function to dynamically create a new node for the linked list
12 // Returns a pointer to the new node
13 struct Node* createNewNode(int number) {
14     struct Node* pNewNode = (struct Node*) malloc(
15         sizeof(struct Node));
16     pNewNode->vertNum = number;
17     pNewNode->next = NULL;    //initially unconnected
18     return pNewNode;
19 }
20 void printlist(struct Node *crt){
21     while(crt){
22         printf("%d --> ", crt->vertNum);
23         crt=crt->next;
24     }
25 }
26 int main() {
27     struct Node* head; //pointer to the head of the list
28     struct Node* crt;  //pointer to the current node in the list
29     struct Node* temp;
30
31     //This is the first node-DO NOT CHANGE head until the list is deleted!
32     head = createNewNode(10);
33     crt = head;
34
35     temp=createNewNode(20);
36     head->next=temp;
37     crt=head->next;
38
39     temp=createNewNode(30);
40     head->next->next=temp;
41     crt=head->next->next;
42
43     crt=head;
44     printlist(crt);
45 }
46
```

```
$gcc -o main *.c -lm
$main
10 --> 20 --> 30 -->
```
